For example, you can use a Remote Web Part to display the list of documents that are stored on a document server in an organization. The web part requires that an App Web Reference is created to the Web Application or Web Site containing the.aspx page or.cshtml page that returns the data. The App Web Reference can be created in one of two ways. Create the App Web Reference using a Visual Studio project that contains an.aspx or.cshtml Web Form Create the App Web Reference using a Web Reference Generator (for example, via SharePoint Designer or SharePoint Framework) The App Web Reference is available in Visual Studio, which is installed with SharePoint Online. If you are creating a web part using Visual Studio or SharePoint Framework, the App Web Reference needs to be created in a Visual Studio project that is included in the web part package. In the example below, a Visual Studio project is included in the package and a Visual Studio project will be created if one does not exist. The App Web Reference is available to the developer when building the web part. It is available in Visual Studio and can be accessed using the Visual Studio File System (VSS). The App Web Reference is not available when publishing the web part to the SharePoint site. It needs to be created when building the web part. Below is an example of the App Web Reference in Visual Studio. Notice the App Web Reference is defined as a reference to the SharePoint List app and the Web App is defined as a reference to the.aspx page that returns the data. The App Web Reference is named AppWebReference.![/](glasgowmedj75551-0065){#sp1.267} ![/](glasgowmedj75551-0066){#sp2.268} ![/](glasgow

Both the countries are looking forward to produce their best result in the tournament. They have been under constant pressure since their last meeting at 2014 FIFA World Cup. Argentina won the match by an amazing 3-1 goal-fest and qualified to the next round. Iran won the last match against Serbia by the score of 2-0. Argentina has qualified to the next round and Iran has qualified to the quarter-final round. Iran is looking to defend their title in the next round. In this tournament, Iran has defeated Qatar, Russia, and Spain. The Olympic Winter Games 2018 is being held in Pyeongchang, South Korea. The Olympic Winter Games 2018 Men's Semifinals will be played in Gangneung, South Korea. It will be held at 5:00 pm IST (3:00 pm IST) on Saturday, February 24. The hosts, South Korea will take on the Olympic Winter Games 2018 Men's Quarter-finals, Group B on the same day. The Quarter-finals will be held at 4:00 pm IST (1:00 pm IST). The live streaming for the match will be available on Star Sports website. The TV channels and the mobile apps will broadcast the match for the visitors. The South Korean broadcasters, led by Channel 9, will telecast the match live. The live score for the match can be checked on sports123.com.

WASHINGTON—The U.S. Supreme Court on Monday backed the government's view that a New York City regulation limiting the size of soda and other sugary drinks sold in restaurants, movie theaters, sports arenas and sports stadiums is not a proper use of the city's zoning laws. At issue was an agreement the Bloomberg administration made with the American Beverage Association in 2007 that included a provision restricting the size of containers of sugary beverages sold in those venues to 16 fluid ounces (about a quarter-liter). At a...
