Available as a stand-alone or integrated version (with Photoshop®), DRAWings® 6 has all the functionality of the latest version plus new features as highlighted below. It is easily used for single embroidery applications like embroidery charts, laces, t-shirts and swimwear, as well as multi-embroidery machines. PACKAGE FEATURES {#sec1-3} ================ Integrated with Photoshop® {#sec2-5} ------------------------- This is the first version of DRAWings® to be fully integrated with a graphic design software. It enables designers to create custom designs for embroidery and laser cut designs for fabric cutting in a single application. In addition to design preview for the specific file formats, the file can be created directly in Photoshop® and imported into DRAWings®. The integrated version is the recommended version to use for the first time. Embroidery engine design {#sec2-6} ----------------------- DRAWings® has been enhanced to be more comprehensive and user friendly. Embroidery features like heart, leaf, star and other custom designs are now available. To make it more comprehensive, a new embroidery engine has been introduced. It incorporates concepts such as the dimension of the background, the number of colors, back patch, text and other specific data for each file format (tutorial "Embroidery - Basic Concepts" is included in the software). Additional export functions {#sec2-7} -------------------------- This includes the generation of EPS files, PDF files and PNG files. It is now possible to export the design to JPG, TIFF or BMP. Improved interface {#sec2-8} ------------------ This includes icons for different file formats (tutorial "Unusual file formats" is included in the software). An improved help section has been added to the software. Updated video tutorial {#sec2-9} ---------------------- This tutorial includes a complete introduction to the integrated version and features of DRAWings®. NEW FEATURES {#sec1-4} ============ Design flexibility {#sec2-10} Color management {#sec2-11} ---------------- This includes preview, edit and generate tool options for color, saturation and contrast.
