Jan 15, 2013 [Taken
from
system.net.config
file of my DFS
system] [Taken from
system.net.config
file of my VPS box]
This is an attempt
to use Google's
Public DNS servers
which will make
surfing the web etc
much better speed
right click over
the code and a
context menu will
appear, select 'Go

to' and then
'Expression' (or
use the shortcut
Ctrl+G).. In the
text box .1 answer
Trash File System
(DFS) has its own
-.11,.12,...11.1,
etc. of its own
tables. These are
not the same as the
tables in the
Master System.net.c
onfig.The table
with the.1 is the
table that the OS i
s being built on..

This is the table that we shall be getting the Deep Freeze file for. OK?, I will paste that in a bit.. So.., when Windows NT [or 2000] is being built the Tables in the System.net.config file are.. The tables in the above Configuration file are in the format name="connection". So the table that

looks like this..
The table that the
Deep Freeze looks
for is like this..
As you can see,
there is an "extra"
row with a ".1" in
the 1st column [If
you notice the "1"
is between the
numbers.. not just
before the
numbers..] [You can
download a copy of
the DFS table from
my
system.net.config

file. It is in a
text file. It has
the ".11", ".
