A metalloproteinase is purified from the haemolymph of *Mytilus galloprovincialis* by a method involving extraction with buffered Tris-Triton followed by gel filtration chromatography on Sephadex G-75. The purification procedure yields a protein with a molecular mass of about 30 kDa which has been identified as a metalloproteinase by sodium dodecyl sulphate polyacrylamide gel electrophoresis and gel zymography. In addition, a specific protease inhibitor is added to the extraction buffer to remove contaminant metalloproteinases. The protease causes an increase of the sensitivity of A549 human carcinoma cells to bleomycin (but not to H<sub>2</sub>O<sub>2</sub>), and is thus presumed to be involved in the production of bleomycin-induced apoptosis. // Copyright 2015 The

Real Temp Serial Key is a compact and portable software utility designed for power PC users, which has a very simple purpose: it monitors the processor temperature to help you prevent hardware overheating by taking immediate action, such as turning off the computer. It features benchmarks and several handy customization settings. No installation necessary There is no setup pack involved, so you can drop the program files in any part of the hard disk and just click the executable to launch the app. Another possibility is to save Real Temp to a USB flash disk or similar storage unit, in order to run it on any PC easily. Plus, it does not create new entries in the Windows registry or Start menu. Clear-cut interface with live readings The main window does not include visually appealing elements but it is simple to navigate. It shows the current processor temperature and difference from maximum value, minimum and maximum reading recorded and time of recording, along with the thermal status. Run sensor benchmarks and customize rich settings It is possible to perform sensor tests to find out the average CPU load and difference from the maximum temp, time, speed and score. As far as customization settings are concerned, you can calibrate the maximum temperature, enable system tray icons for monitoring the CPU cores and maximum temp, enable alarms, log all activity to file, and more. Settings may be restored to default. Evaluation and conclusion Real Temp has minimal impact on system resources and a great response time. It shows accurate data and worked well in our tests, without triggering the OS to hang, crash or pop up error messages. Thanks to its advanced options and versatile range of customization settings, Real Temp should meet the requirements of most users looking for a straightforward tool for monitoring processor temperature. Too bad it does not come equipped with automated tasks in case of overheating, such as PC shutdown. Real Temp Video Guide Review: REAL TEMPERATURESIDE OUT #22 With Drew Sheldrick as the "Ice and Fire Correspondent" \* Apologies for the short notice, guys. Settings may be restored to default. E... Real Temp A minimal, speedy app for PowerPC Real Temp is a minimal and speedy app that works with PowerPC processors. When it starts, it displays the CPU temperature and its maximum, minimum and average values. It also shows the difference from each of those values. It allows you to calibrate the max temperature, to monitor all 8 cores and the highest temperature for each, as well as log all activity to a file. It has the makings of a good monitoring app, but it needs more work and some more features. For now, Real Temp is a good choice for anyone who wants a simple app that can run on PowerPC without needing much of an installation. Real Temp does not have a lot of features. It displays the system temperature and the max, min and avg CPU temperature. It logs the CPU and system temperatures every minute, and it allows you to calibrate the max temperature. It also gives you an option to check every CPU core. There are some problems though. First, the interface could be more user friendly. It isn't very intuitive and the reading quality isn't that good. Second, you have to click the save button to save the reading, so you have to move the mouse from the app itself to somewhere else to exit out of the screen. Lastly, it doesn't have a restart or shutdown button. It can only be exited. That being said, Real Temp is a pretty decent app. It's perfect for people who just want an app that will check the CPU temperature and keep an eye on it without slowing down their computer. It also has a
