Drivers for Dell XPS 15 Laptop with Windows 10, Download Windows 10 Drivers for your XPS laptop, Download the Windows 10 drivers for your computer using this. Ufed Physical Analyzer (SoftOzone) Download. The present invention relates to an optical disc and a method of manufacturing the same, and more particularly, to a method of manufacturing a stamping optical disc having a reflective film and a substrate and an optical disc manufactured by the method. A conventional optical disc of the stamping type, which is manufactured by subjecting a reflective film and a substrate to injection molding, is manufactured by the method illustrated in FIG. 2. Referring to FIG. 2, a reflective film (12) and a spacer film (14) are subjected to injection molding using a stamper (10) to produce a stamped optical disc (13). Accordingly, a cavity portion (11) formed by a mirror-surface of the stamper (10) is formed with a reflective film (12) and a spacer film (14) of the optical disc (13) in a mirror-surface. During manufacturing of the stamping optical disc (13), a spacer film (14) having a thickness of about 50 μm is formed on the rear surface of a reflective film (12) having a thickness of about 50 μm . Therefore, it is difficult to produce a high density stamping optical disc (13) because it is difficult to form both of the reflective film (12) and the spacer film (14) to be of the same thickness. In addition, if the reflective film (12) of the stamping optical disc (13) is formed by the method of pressing a reflective film using a press head, it is difficult to obtain a reflective film (12) having a thickness of less than 50 μm . In a conventional stamping method, when a reflective film is formed on a substrate using a stamper, a reflective film having a thickness of about 50 μm is typically formed by pressing and thereby causing an area of a reflective film formed on the substrate to be partially thickened so that the amount of a reflective film in a thickness direction becomes a certain thickness. In order to form a thinner reflective film, it is necessary to press the reflective film with a lower pressure and increase a pressing force so that the thickness of the reflective film does not increase. However, in that case, a pressed portion of the substrate is f30f4ceada
