Capture is a professional application that aims to assist engineers and architects in creating complex lighting systems for concerts and theaters. Providing a user-friendly working environment, it enables technicians to unleash their creativity and use their skills and knowledge in order to enhance the quality of a stage show. Capture is a professional application that aims to assist engineers and architects in creating complex lighting systems for concerts and theaters. Providing a user-friendly working environment, it enables technicians to unleash their creativity and use their skills and knowledge in order to enhance the quality of a stage show. Create modern lighting system designs Capture features all the tools necessary for designing real-time illumination systems, taking into account all the requirements of stage lighting, from selective visibility or focusing to using the light for setting the tone of a scene. It is highly important that designers come with a solid knowledge base regarding light physics and human perception, but this application helps them create modern lighting systems that include special effects. Extended object library for stage design The application enables you to work with multiple layers and view the scene from multiple perspectives simultaneously. The variate object library includes numerous stage items, from electronics, music accessories and instruments to furniture and stair cases, geometrical shapes and people. Practically, your project can include all the objects that might interfere with light propagation. Aside from the object collection, Capture features a plethora of filters, customizable gobo templates ('GOes Before Optics'), lighting fixtures, materials, motion controllers and symbols, all aimed at helping you create a realistic environment. A worth-having tool for technicians and stage designers To conclude with, Capture provides technicians and stage designers with a feature-rich and comprehensive lighting designing tool that can help them in the production of theater and just about any other performance act. It combines ease of use with advanced designing capabilities, enabling them to generate the artistic effects that any show requires to amaze the audience. KEYMACRO is a PC keyboard macro utility software program. It has a quick and easy interface. You can create many keyboard macros for your PC with very little effort. The editor provides a WYSIWYG (What You See Is What You Get) way to edit and save macro sequences. It supports up to 60 macro sequences. You can modify macros and edit the recorded macro sequences. You can define the transition duration of each macro. Its key press recording functionality is of great help to the people in the field of communication and education. You can be totally independent with the recording. It supports the recording of Win32 keystrokes, press of special keys, mouse clicks and dragging actions. It provides visual indications of keystrokes, mouse clicks and drag events. If you are using a program like MICROSOFT VISUAL STUDIO, you need not compile or build your code to debug it. You can debug it from the macro editor. Interface Screenshot: Main features Create keyboard macros for Windows. Keyboard macro recording and playback. Record macros. Capture is a professional application that aims to assist engineers and architects in creating complex lighting systems for concerts and theaters. 1. Create real-time lighting system designs. Capture provides a user-friendly environment for professional stage designers. It integrates all the tools necessary for designing real-time illumination systems, including filters for objects, lighting fixtures, lighting instruments, and lights, as well as a variate library of objects for designing customized gobos. 2. A set of customizable and customizable filters Capture comes with various filters that aim to create the best possible lighting effect. The filters can be applied to the whole scene or to objects, materials, as well as customized gobos. The filters consist of key color attributes, focus/unfocus, de-focus, beam rotation, spot, color temperature, and iris. Each filter can be synchronized with the camera and applies to the video feed. 3. A variate object library Capture features a variate object library that contains a vast array of common objects for stage design. From electronics, music accessories and instruments to furniture and stair cases, geometrical shapes and people. Practically, your project can include all the objects that might interfere with light propagation. 4. Multiple views, multiple layers, and multiple perspectives Capture enables you to work with multiple layers and view the scene from multiple perspectives simultaneously. The variate object library includes numerous stage items, from electronics, music accessories and instruments to furniture and stair cases, geometrical shapes and people. Practically, your project can include all the objects that might interfere with light propagation. 5. A collection of customizable gobos The application includes a collection of customizable gobos that can be applied to the scene, people and objects. 6. A set of customizable motion controllers Capture offers a set of customizable motion controllers that are aimed at helping you create realistic motions. In addition to the functionality and ease of use, the controllers are highly customizable, which enables you to focus on your specific requirements and your stage design. 7. A set of customization symbols The application comes with a set of customizable symbols that can be applied to the objects in the scene and to the

hands of the people. 8. And last but not least, a tool for integrators You can integrate your created content with other video or 3D applications, such as apps that provide automatic rendering, 3D viewports, and 3D modeling. These apps will enable you to create a highly convincing visualization that will help you to sell your product. The final rendering is done by means of powerful computers. Capturing provides a high-quality rendering of the designed stage. The rendering takes place in real time and in the foreground of the operating system. This makes your work more efficient and saves the time of graphics card development. 9. A selection of effects Capture features a selection of effects such as beam rotation, beam movement, zoom, chromatic aberration
