Summary In this chapter, we explored ways to use Photoshop to create images that are realistic in appearance. We started by learning how to use the layers in Photoshop and creating layers for special effects. We then learned how to use the painting tool and how to use masking to create our own artwork. We then explored how to apply color, contrast, brightness, curves, perspective, and more with a variety of tools found in the Colors, Curves, and Levels tools. You learned how to make selections, create a clipping mask, edit selections and layers, and combine layers. We also explored the smart object tools and the Liquify feature for creating masking, smoothing, and transforming objects. Finally, we saw how to use blending and layer effects to make realistic images. We covered a variety of blending modes that allow you to create multiple effects that mask through other images. We also explored adjustment layers and how to use them to retouch and manipulate your images. In the following chapter, we are going to examine working with images in the digital age. ## **Chapter 10 Working with Digital Images** Before we begin, let's first look at what some people think when the word _digital_ is used. "Digital" could be substituted for "electronic" in several contexts, such as computer, mobile, music player, and more. So, you might hear someone say, "I've got this great new digital camera" or "I have this new digital music player," or "My new mobile phone is digital." Although the technology has come a long way, the pictures you take on your new digital camera are still not digital, because they still have to be chemically processed in a digital image developer. So, let's stick with the facts, and we'll see what we find out about working

Trojans, hungry for a rare breakthrough in the conference, will play Brigham Young in a season finale Saturday at Autzen Stadium. If the Trojans do win, there is a chance they would be the first to win the Pac-12 South. It would also clinch a bid to the inaugural College Football Playoff, though a date hasn't been set. USC is the only Southern California team that could make it to Pasadena. The Trojans are ranked second in the Pac-12 South and seventh in the country behind Alabama, Clemson, Ohio State, Georgia, Wisconsin and Auburn. If the Trojans are in the playoff they would travel to Stanford or Oregon if the NCAA selection committee votes to keep 16 teams. The Pac-12 champion would play the winner of the Big Ten or Big 12 champion. The Trojans won five consecutive games before being upset by Washington State in the first Pac-12 championship game last month. But they have clawed back into contention in the rugged South Division. They won three straight games against Stanford and rival UCLA. Oregon State is 2-5 in conference play. The Beavers beat the Trojans in September, but they have lost at home to USC, too. UCLA (5-2, 2-1 Pac-12) has won its last two after losing its first three. Arizona State (3-4, 1-2) is off until next season. The Trojans are seeking their third consecutive victory over the Bruins. USC is coming off a 26-24 victory over the Bears. UCLA is looking for a fifth straight victory over a ranked USC team. The Bruins play No. 3 Mississippi State on Saturday in the Texas Bowl. The Bruins are battling for a berth in the College Football Playoff against Ohio State or No. 1 Alabama. These two teams are tied for first place in the Pac-12 South. California (5-1, 3-0) beat UCLA in two of the teams' three meetings last season. USC is coming off a three-game winning streak. This is the first time the Trojans have opened the season on the road since 2006. USC lost to UCLA in 2011 to start its conference schedule. UCLA has the nation's No. 2 scoring offense (50.0 points per game). Tyler Huntley leads the Bruins with 1,328 passing yards, 689
